SUMMARY

Computer Science graduate with hands-on experience building backend services in Go and PostgreSQL, developing systems-level software in C++, and administering Linux environments end to end. Delivered complete projects independently across backend, mobile, and systems programming, with practical networking exposure gained through a telecom internship. Seeking Backend or Systems Engineer roles.

EXPERIENCE

Networking Intern — Ethio Telecom

2 Months

Installed, configured, and troubleshoot Wi-Fi networks and wired telephone lines for residential and business customers as part of the Network Installation & Maintenance team, diagnosing connectivity issues to ensure reliable service delivery.

Independent Technical Projects

- **Backend Development:** Built REST APIs in Go with PostgreSQL for a full-stack typing tutor application.
- **Linux Systems Administration:** Configured and maintained Linux systems (systemd, LVM, shell scripting) across Arch and Mint.
- **Mobile & Cloud Development:** Built a cross-platform Flutter app with Firebase authentication and cloud data storage.
- **Full-Stack Web Development:** Built a Node.js/MongoDB REST API with a React frontend for a media platform concept.

EDUCATION

Bachelor of Science in Computer Science

02/2023 – 06/2026

Addis Ababa University

Addis Ababa, Ethiopia

SKILLS

Coding Languages: Go | C++ | Python | JavaScript | Dart | Rust | PHP

Backend: PostgreSQL | SQL | MongoDB | REST APIs | JSON | Authentication | Node.js | Firebase | Firestore

Cloud & Systems: AWS (Cloud Practitioner) | Linux | Networking | Bash | systemd | Git | LVM | Docker | Kubernetes

Frameworks: React | Next.js | Flutter

Concepts: OOP | Database Design | Data Structures & Algorithms | Software Engineering | SDLC | Unit Testing | GitLab CI/CD

Professional Skills: Analytical Thinking | Problem Solving | Communication | Team Collaboration | Adaptability | Time Management | Technical Documentation

LANGUAGES

Amharic — Native

English — Fluent

PROJECTS

Selected projects below — full portfolio and source code on github.com/paulGitRoot

Type-Heric

Go • PostgreSQL • React • REST API

- Designed and implemented a RESTful backend in Go for managing typing sessions and tracking user progress.
- Built a PostgreSQL database schema to store user statistics, typing history, and performance metrics.
- Developed a responsive React frontend supporting real-time typing practice in both Amharic and English.
- Implemented real-time calculation of typing speed (WPM), accuracy, and progress tracking.
- Structured the application using clean REST API design and modular backend architecture.

TaskFlow+

Flutter • Firebase Authentication • Firestore

- Developed a cross-platform productivity application for Android using Flutter.
- Integrated Firebase Authentication for secure user registration and login.
- Implemented full CRUD functionality with Cloud Firestore for task management.
- Added local notifications, streak-based habit tracking, and productivity insights.
- Designed reusable widgets with responsive layouts across different screen sizes.

Redis Clone

Go • TCP • RESP Protocol

- Building a Redis-compatible in-memory data store server in Go from scratch, implementing raw TCP networking with concurrent client handling via goroutines.
- Implemented a RESP (Redis Serialization Protocol) parser supporting arrays and bulk strings, matching Redis's real wire protocol byte-for-byte.
- Actively extending the project with core commands, persistent storage, and key expiry.
